

Multigum

Details du produit

Description

This is a rubber grommet or cable gland, which fits over the cable gland. The cable gland is supplied with a membrane that only opens to let the cables pass, which keeps them tight from the start. They are mounted on hole. They are suitable for versatile applications, which require a small footprint and especially where the visual aspect is important.

Advantages

They are dust tight. Their installation is particularly simple and quick without tools.

Qualities

They protect the passage of wires / cables in sheet metal or even in electricity. Our cable glands are simple but their use often exceeds common grommets and can be used with a wide variety of cable diameters.

usage

It can be installed without tools as it does not need any cutting or opening. It adapts exceptionally well to cables that need to be installed in angles and angled applications.
