

# Cuscinetti autolubrificanti

## Dettagli del prodotto

### Descrizione

I cuscinetti sono cilindrici e autolubrificanti. Chiamati anche anelli o rondelle, si tratta di elementi che permettono di facilitare lo scorrimento senza attrito di insiemi meccanici in movimento.

### Vantaggi

I cuscinetti in plastica liscia sono costituiti da diversi materiali termoplastici come il PTFE e il POM e possono quindi essere soggetti a varie sollecitazioni. Il loro vantaggi sono la stabilità dimensionale, l'elevata resistenza alla compressione e allo scorrimento, la bassa dilatazione e la buona conducibilità termica.

### Qualità

Questi cuscinetti lisci offrono delle buone prestazioni in condizioni di funzionamento a secco.

### Utilizzo

Questi cuscinetti in plastica sono usati in molti settori di attività, in particolare nella costruzione dei macchinari agricoli, il materiale di trattamento chimico, le macchine di manutenzione, di imballaggio, nonché le macchine tessili e le attrezzature per l'industria agroalimentare grazie alla loro leggerezza, la loro resistenza all'usura e alla corrosione.
