

Viti a cava esagonale DIN 912

Dettagli del prodotto

Descrizione

La vite a testa cilindrica con cava esagonale DIN 912 è una delle viti più usata nell'industria. Queste viti hanno una filettatura integrale fino a 80 mm per la maggior parte delle viti. Grazie alla sua chiave esagonale , il serraggio della vite è perfetto .

Qualità

Per le lunghezze 15 e 17 mm, le viti sono parzialmente filettate cioè non filettate di 5 mm sotto la testa. Sono resistenti alla maggior parte delle sostanze chimiche grazie alla possibilità di potere declinarle in diversi materiali (PA, PP, PVDF, PEEK...)

Vantaggi

La plastica offre vantaggi certi sul metallo: è più leggero, inossidabile e non è conduttore di elettricità. Ha una grande robustezza e una buona resistenza all'abrasione. Inoltre, la sua resistenza rimane elevata su ampio spettro di temperature (da -30 °C a + 100 ° C).

Utilizzo

Le viti a testa cilindrica con cava esagonale sono spesso usate nei casi in cui lo spazio è limitato, come nei dispositivi meccanici e specializzati.
